

Active Pharmaceutical Ingredient API Wholesale & Bulk

All drugs are made up of two core components—the API, which is the central ingredient, and the excipient, the substances other than the drug that help deliver the medication to your system.

API, also called Active Pharmaceutical ingredient, are prepared by chemical synthesis, plant extract or preparation of biotechnology. But the patient is unable to take the substance directly, generally after adding accessories, processing, to make direct-use drugs.

The active pharmaceutical ingredient (API) is the part of any drug that produces the intended effects. Some drugs, such as combination therapies, have multiple active ingredients to treat different symptoms or act in different ways.

Digestive Tract And Metabolism API Raw Materials

Digestive tract and metabolism system is one of the most important systems in the human body. It is responsible for breaking down food and moisture into substances available to our bodies and removing waste from the body, and the digestive and metabolic systems work together to provide energy to our bodies to ensure that we can perform our daily activities effectively.

Digestive tract and metabolism system diseases are also common in clinical practice, and drugs for the treatment of digestive tract and metabolism system diseases also play an important role in medicine.

Cardiovascular API Raw Materials

The cardiovascular system is a "closed" pipe system, the heart is the muscle-powered organ that pumps blood, and the pipeline system that transports blood is the vascular system. It transports nutrients absorbed by the digestive tract and oxygen absorbed from the gills or lungs to the organs of the tissues and the metabolites of the organs of each tissue are fed into the blood in the same way and excreted through the lungs and kidneys. It also transports heat to various parts of the body to maintain body temperature and hormones to target organs to regulate its function.

Antibiotics API Raw Materials

The first antibiotic drug discovered in humans was penicillin, which was developed during World War II due to the need for effective anti-infective agents. Antibiotics generally refer to a class of substances produced by bacteria, molds or other microorganisms in the course of life with anti-pathogen properties. It is an important drug to control human and animal infectious diseases, anti-tumor and plant pests and diseases. Antibiotics are a secondary metabolite of microorganisms, and when used in small low concentrations, they can inhibit or kill the growth and metabolism of another microorganism.

Antifungals API Raw Materials

Antifungal drugs are drugs that inhibit or kill the growth or reproduction of fungi. Fungal infection can be divided into superficial fungal infection and deep fungal infection two categories, superficial infection is caused by bacteria invading the skin, hair, finger (toe) armor and other body surface, high incidence, less harmful. Deep fungal infection is caused by Candida and cryptococcal bacteria invading internal organs and deep tissue, the incidence rate is low, the harm

is large.

Vitamins API Raw Materials

Vitamins are the generic term for a range of organic compounds. They are micronutrients needed by organisms, which are generally not produced by organisms themselves and need to be obtained through diet and other means. Vitamins don't produce energy and make up cells like sugars, proteins, and fats, but they regulate the metabolism of organisms.

Amino Acids API Raw Materials

Amino acids are commonly referred to as a class of organic compounds containing amino and carboxyl. It is the basic substance that makes up the proteins needed for animal nutrition. The first nutrient element in the body, its role in food nutrition is obvious, but in the human body can not be directly used. It is absorbed in the small intestine through a variety of digestive enzymes in the gastrointestinal tract and enters the liver along the liver veins.

API Health And Safety

Keep container tightly closed. Store in a cool and dark place. Store away from incompatible materials such as oxidizing agents.

How Active Pharmaceutical Ingredients Are Made?

The development and production of API include reaction, crystallization, separation purification, cake washing, solvent exchange, solvent exchange, and other processing steps.

Active Pharmaceutical Ingredient Manufacturing Process

The manufacturing process of API is complicated.

The production process of API involves complex biochemical reaction processes.

The production process of API is the operating environment.

In the production process, measures and areas to prevent pollution and cross-contamination are needed.

The quality requirements of API are high.

Quality is an important index related to the production of API. If the quality of API is not
